SPONSORSHIP PACKET

Sooner Offroad · University of Oklahoma · Norman, OK

WHY SOONER OFFROAD

THE CASE FOR SPONSORING US

Sooner Offroad is the University of Oklahoma's Baja SAE program — a nationally competing team with a proven track record, a growing roster of engineering talent, and a program on the rise.

We don't buy assemblies off the shelf. Our team designs the geometry, machines the components, welds the frame, and tunes the car — all in-house, all by OU students. Every dollar you invest goes directly into that process.

Your sponsorship puts your brand on the car, on the driver, and in front of hundreds of engineers at the Baja SAE International Competition. It connects you to a recruiting pipeline of hands-on engineering graduates who know how to build things that work under pressure.

This isn't a charity ask. It's a business partnership with real returns — brand exposure, talent access, and the satisfaction of backing something that competes at the national level.

OUR TRACK RECORD

RESULTS THAT SPEAK FOR THEMSELVES

BAJA SAE KNOWLEDGE — 2020-2021

7th Overall

Out of the full national field — alongside Michigan, Cornell, Georgia Tech & Oregon State

COST EVENT — BAJA SAE KNOWLEDGE 2021

1st Place

Best cost presentation in the entire competition field

SALES PRESENTATION — BAJA SAE KNOWLEDGE 2021

3rd Place

Top 3 out of 100+ universities in engineering business communication

BAJA SAE WILLIAMSPORT — 2023-2024

28th Overall

16th in Cost Presentation at the inaugural Williamsport event

COST PRESENTATION — BAJA SAE OREGON 2025-2026

10th Place

49th overall — continuing the team's upward trajectory

100+

UNIVERSITIES COMPETED AGAINST

SOONER OFFROAD

Sooner Offroad is the University of Oklahoma's Baja SAE team — a student-run engineering organization that has competed in the SAE Collegiate Design Series since 1994, with a program revival in the late 2000s that launched the modern era of the team.

Every season, we design and build a single-seat off-road vehicle entirely from scratch. We don't buy assemblies off the shelf. Our students design the geometry, machine the components, weld the frame, and tune the car themselves — all in the REPF shop on campus.

The team draws from mechanical engineering, electrical engineering, computer science, chemical engineering, and beyond. We welcome any OU student willing to show up and put in the work.

The 2025–2026 season marked a structural turning point — a full leadership restructure establishing three co-equal captains, six subsystem leads, and three assistant leads. The result is a more organized, more accountable, and more competitive program than at any point in recent history.

What We Teach Our Members

CAD & FEA SolidWorks design and finite element analysis — real structural validation before a single part is cut.	Welding 4130 chromoly steel TIG welding — chassis fabrication performed entirely by student members.	CNC Machining In-house machined hubs, gearbox housings, and custom components on the shop CNC mill.
Engineering Reports Formal cost reports, design reviews, and sales presentations judged by industry engineers at competition.	DAQ & Electronics Sensor arrays, data acquisition systems, and real-time telemetry designed and built by the team.	Project Management Budget tracking, subsystem coordination, and competition logistics managed by student leadership.

WHAT IS BAJA SAE?

Baja SAE is an intercollegiate engineering design competition organized by SAE International. Each team designs, builds, and races a single-seat off-road vehicle within a strict unified ruleset — the same rules for every school, regardless of budget or program size. There are three national events held each year across the United States, drawing 100+ universities per event.

Competition is divided between static and dynamic events. Static events test the quality of the team's engineering documentation and business communication — design review, cost report, and sales presentation. Dynamic events put the vehicle and driver through the actual demands of off-road racing. A team's total score reflects the full package: how well it was designed, how well it was documented, and how well it performs on the course.

Competition Events

Endurance Race 4-hour wheel-to-wheel race across rough terrain. Reliability and driver stamina are everything.	Hill Climb Maximum traction and torque up a steep, loose-surface grade against the clock.	Maneuverability Tight cone course testing steering response, low-speed handling, and driver precision.
Suspension & Traction Vehicle geometry tested over articulation obstacles and rough-terrain sections.	Design Review Formal presentation judged by industry engineers on design decisions and analysis.	Cost Report Detailed accounting of every component — manufacturing costs, material choices, trade-offs.

Why This Matters to You

Your logo on our car doesn't just sit in a shop — it goes to a national competition event attended by hundreds of engineers, industry judges, and universities. Every photo, every video, every social post from competition puts your brand in front of an audience that is directly relevant to engineering and manufacturing companies.

The Exposure

Baja SAE events draw teams from across North America and internationally. Industry judges come from companies like John Deere, Caterpillar, Boeing, and major OEMs. Your brand is seen by the people who hire engineers — and by the engineers they're looking to hire.

MEET TEDDY

TEDDY - FULL CAR CLEAN SHOT

2025-2026 Vehicle Specs

Engine	Kohler CH440-3337
Drivetrain	CVT + 2WD
Frame	4130 Chromoly Steel
Suspension	Double Wishbone
Gearbox	Custom In-House
Hubs	CNC Machined In-House
Season	2025-2026

Built In-House

- **Custom Gearbox**
CNC-machined aluminum housing designed and built entirely by the powertrain subsystem.
- **Machined Hubs**
Upright and hub assemblies machined in-house to our own specifications and tolerances.
- **Welded Chassis**
4130 chromoly steel roll cage and frame welded by student members in the REPF shop.
- **DAQ System**
Custom sensor array and data acquisition hardware designed by our electrical subsystem.

THE PEOPLE

THE TEAM

CAPTAINS — 2025-2026

 HEADSHOT CAPTAIN Coolidge Rendleman FINANCES & OPERATIONS · CE '27 Oversees the team's budget, purchasing, sponsorship finances, and operational logistics. Every dollar that comes in or goes out runs through Coolidge.	 HEADSHOT CAPTAIN Lance Riley ENGINEERING & DESIGN · ME '27 Leads all technical decisions — CAD, FEA, machining, and major design direction. Drives the engineering vision for each build season.	 HEADSHOT CAPTAIN Abby Irby OUTREACH & RECRUITMENT · ME '28 Heads social media, recruitment, and sponsor outreach. Abby is the face of Sooner Offroad to the outside world — on campus, online, and in industry.

ALUMNI & CAREER OUTCOMES

Sponsoring Sooner Offroad isn't just about getting your logo on a race car. It's about building a direct relationship with the engineers who will be entering your industry in the next one to three years.

Our members graduate with skills that most engineering students don't have — they've welded, machined, run FEA on real structures, built electrical systems, managed budgets, and presented technical designs to industry judges. They know how to build things that actually work.

Gold and Platinum sponsors receive direct access to our graduating members through our Team Resume Bank — a curated pipeline of candidates who have spent their college careers doing exactly the kind of hands-on engineering work that companies need.

What Our Members Bring to Industry

Every member of Sooner Offroad leaves the program with documented hands-on experience in design, fabrication, testing, and competition. They understand budget constraints, tight deadlines, and the pressure of making something work when it has to. These are not students who only know textbooks — they are engineers who have built and raced a vehicle at the national level.

The Resume Bank

Gold and Platinum sponsors receive access to our graduating members' resumes each season. This gives your company a direct line to motivated, experienced engineering candidates before they hit the open job market.

Skills Our Members Enter Industry With

CAD & Simulation

SolidWorks design, FEA structural analysis, and kinematic simulation applied to real vehicle systems.

Manufacturing

TIG welding, CNC milling, tube notching, and precision fabrication on competition-grade components.

Electrical & DAQ

Sensor integration, data acquisition hardware, wiring harness design, and real-time telemetry.

Engineering Communication

Cost reports, design reviews, and sales presentations judged by working industry engineers at competition.

BEYOND THE SHOP

Sooner Offroad's impact extends beyond the competition floor. Our team actively participates in OU's community outreach programs — connecting with younger students in Norman and across Oklahoma to inspire the next generation of engineers.

LEARNTWICE PHOTO

LearnTwice

LearnTwice is an OU educational program that bridges the university and the local community. Sooner Offroad members visit local schools to share hands-on engineering experiences — bringing the car, the tools, and the stories directly to younger students. Members reinforce their own technical knowledge while inspiring kids who may never have considered engineering as a path.

THE BIG EVENT PHOTO

The Big Event

The Big Event is OU's large-scale annual community service initiative — one of the largest single-day service events in Oklahoma. Sooner Offroad participates each year alongside thousands of OU students, volunteering for local nonprofits, parks, and community organizations. It reflects the team's commitment to giving back to the Norman community that supports the program year-round.

SPONSORSHIP LEVELS

PARTNER WITH SOONER OFFROAD

Four tiers of partnership — from entry-level brand visibility to a full flagship relationship with exclusive access, named components, and a direct pipeline to our engineering talent.

All partnerships are 100% tax deductible through the OU Foundation, a registered 501(c)(3) nonprofit organization. A formal tax receipt is provided upon commitment.

BRONZE	SILVER	GOLD	PLATINUM
\$250+ Get your name on a nationally competing Baja SAE vehicle and join the Sooner Offroad family.	\$1,000+ Your logo on the car at every event we compete — plus a shop tour and social recognition.	\$2,500+ Strong on-car visibility, driver gear placement, and direct access to our recruiting pipeline.	\$5,000+ The flagship partnership — primary placement, exclusive access, and a direct pipeline to our top talent.
– Name on Vehicle – Car Unveiling Recognition – Social Media Recognition – Season Newsletter	– Medium Logo on Vehicle – Shop Tour – Social Media Recognition – Season Newsletter	– Large Logo on Vehicle – Logo on Driver Gear – Track Day Invitation – Shop Tour – Recruiting Pipeline Access – Social Media Feature – Season Newsletter	– Primary Logo on Vehicle – Logo on Driver Gear – Named Component – Competition Invitation – Team Resume Bank – Season Technical Report – Branded Social Posts – Dedicated Team Liaison – Signed Team Photo

100% Tax Deductible — All sponsorships are processed through the OU Foundation, a registered 501(c)(3) nonprofit. Your contribution is fully tax deductible and a formal receipt will be provided.

LET'S WORK TOGETHER

Ready to partner with Sooner Offroad? Reach out and we'll send you a personalized sponsorship proposal within 24 hours. No forms, no waiting — just a direct conversation about how we can work together.

What Happens Next

- 01** Reach out by email or Instagram. Tell us which tier interests you and a little about your company.
- 02** We'll send a personalized proposal and answer any questions about the partnership within 24 hours.
- 03** We finalize the agreement, process through the OU Foundation, and send your tax receipt.
- 04** Your logo goes on the car. We keep you updated through the season with photos, results, and your newsletter.
